Hi Mike –

I got your voicemail, but I'm out of the office today.

I think there are two items that will require further discussion with Roux:

- 1) The soil background areas. We will need a revised Figure 4 (with the surface soil types) to facilitate the identification of alternate background areas for two of the soil types.
- 2) The approach for how background should be used (i.e., the proposed flow diagram). In particular, the use of a Form II Background Test and the fact that we do not advocate the use of a Background Threshold Value (BTV) for refining COPCs.

I expect we will need to have a call to discuss both topics. I'll be checking email today if you have specific questions or I'll be back in the office on Monday if you would like to chat.

Thanks,

Lynn
